

Yuhan Chi

Undergraduate, School of Mathematical Sciences, Fudan University

yhchi25@m.fudan.edu.cn | chi-shan0707.github.io | github.com/Chi-Shan0707 | Online CV

PROFILE

Undergraduate at **Fudan University** (School of Mathematical Sciences), pursuing a double degree in **Information and Computing Science** and **Artificial Intelligence**.

GPA: **3.96/4.00** (Fall 2025), **4.00/4.00** (Spring 2026); Cumulative: **3.98/4.00**; Rank: **3/213** in cohort.

EDUCATION

Fudan University

Shanghai, China

B.S. Candidate in Information and Computing Science & Artificial Intelligence (Double Degree), School of Mathematical Sciences. Sep. 2025 – Present

RESEARCH INTERESTS

- **Mathematical Interpretability and AI Trust:** grounding claims about model reliability in inspectable mathematical and statistical evidence
- **Reasoning Verification and Evaluation:** studying when trace-level signals are diagnostic, misleading, protocol-dependent, or domain-specific
- **Optimization, Control, and Sequential Decision-Making:** using mathematical tools to reason about uncertainty, feedback, constraints, and interaction with environments

SELECTED OPEN-SOURCE PROJECTS

token-verification-mirage

[Paper](#) · [AI4Math Workshop](#)

- Poster, **ICML 2026 Workshop on AI for Math (AI4Math)**; solo-authored, full pipeline (dataset selection, generation, evaluation design, analysis, writing)
- Evaluation-protocol choices alone (pooling, in-sample scoring, direction-agnostic AUROC) shift apparent verification AUROC by up to **0.18**
- Under corrected within-problem, leave-one-run-out, fixed-direction scoring, shallow token statistics cluster at only **0.60–0.75 AUROC**; final-token entropy drops from 0.72–0.75 to 0.47–0.48 once the direction-agnostic reporting artifact is removed

code-not-text

[Demo](#)

- Cross-domain measurement study across 31,040 math, science, and coding runs: AoA 0.958 (math), 0.799 (science), 0.434 (coding, below the random-direction baseline)
- Rules out five alternative explanations for the coding failure (model capacity, label scarcity, surface noise, feature coverage, judge framing) — all converge to the same ceiling; frames the result as measurement non-invariance

TinyLoRA-GRPO-Coder

[DeepWiki](#) · **40 stars, 3 forks**

- Adapts *Learning to Reason in 13 Parameters* (Morris et al., 2026) to competitive programming: trains 32 shared scalars via GRPO on Qwen2.5-Coder-3B, rewarded by real g++ compile-and-run outcomes
- Controlled A/B test: v4.0 recipe improves Pass@1 by **+100%** (1.82% → 3.64%) while cutting training data by 99.8% and training time by 73%
- Most-starred solo project on my GitHub; 6 releases, external forks and contributors

microgpt.cpp

7 stars, 2 forks

- Minimal GPT (autograd, multi-head attention, Adam) from scratch in ~300 lines of C++, inspired by Karpathy's teaching gist

ACADEMIC SERVICE & LEADERSHIP

Reviewer, ICML 2026 Workshop on AI for Math (AI4Math), 2026

Founder, Fudan Open Source Initiative (FDU-OSI) — **8 stars**

- Authored and published a repo-naming/topic-tagging convention (`fdu-course-*`, `fdu-project-*`) so Fudan students' course notes, project demos, and research prototypes stay discoverable across accounts, with no central registry or approval process

Talk: Reinforcement Learning: From Bandits to PPO — Apr 18, 2026 ([PDF notes](#))

- Overview covering multi-armed bandits, MDPs, policy gradient, and PPO

SKILLS

Programming

Python, C++, C

ML/AI

PyTorch, ML experimentation, LLM evaluation, RL basics

Tools

Git, GitHub, Linux, LaTeX, Markdown

Language

Chinese(native) English(fluent)

SELECTED COURSE GRADES

Semester	Course	Grade	Semester	Course	Grade
Fall 2025	Programming	A	Spring 2026	Mathematical Analysis II	A+
	Analytic Geometry	A		Advanced Algebra II	A
	Mathematical Analysis I	A		Foundations of Software for AI	A
	Advanced Algebra I	A-		Introduction to AI	A

COMMUNITY INVOLVEMENT

- [github-unflag-playbook-cn](#) — Chinese playbook for GitHub account flagging/recovery (19 stars)
- [ic-guide](#) — Open-source self-learning guide for integrated circuits
- [FDUGuideBook/nav-site](#) — Student navigation site for the Fudan community
- [FDU-Sharing](#) — Mutual-aid course-material sharing
